I am a Full-Stack Developer with skills in MERN Stack and .NET technologies. I enjoy building web and desktop applications while integrating AI to enhance their functionality. I work on both front-end and back-end development, aiming to create scalable, user-friendly applications with AI integration that solve real-world problems.

SKILLS

HTML, CSS, JavaScript, TypeScript, Bootstrap, TailwindCSS, React, Next.js, Node.js, Express.js, MongoDB, RESTful API, SQL Server, Version Control (Git & GitHub), .Net technologies, Artificial Intelligence (AI) integration, Machine Learning, Object Oriented Programming (OOP), Data Structures and Algorithms (DSA), Database Management (DBMS), Programming Fundamentals (PF), Python, CSharp (C#), Project Management

EDUCATION

University of Gujrat (UOG)

Dec 2022 – Aug 2026

BS Computer Science (**CGPA: 3.46**)

EXPERIENCE

App Pillars – MERN Stack Internship

Nov 2025 – June 2025

- Developed responsive frontend designs and gained full-stack development experience using the **MERN stack**. Used Git for **version control**, **integrated APIs**, and managed **SQL** and **MongoDB** databases. Collaborated in a team to streamline workflows, enhance **UI/UX**, and successfully deploy applications.

PROJECTS

2D Image Anomaly Detection System – Final Year Project

- Developed a web application using deep learning and computer vision to detect anomalies in 2D Images real-time. Built the front end with React.js, backend with FastApi, and integrated with custom integrated model for identifying defects and irregularities. Improved detection accuracy, reduced manual inspection by 20%, and enhanced quality control efficiency by 18%.

ERP Rice Navigator

- Developed a web-based ERP system for a rice mill and export operations firm using React 19, Tailwind CSS, Node.js, Express, Prisma ORM, and PostgreSQL to streamline business workflows and multi-role management. Improved operational efficiency by reducing manual record-keeping by 30% and enhanced inventory and export tracking by 25%.

Hospital Management System

- Developed a Property Management System using .NET and SQL Server with role-based access control to securely manage property listings and transactions, reducing administrative workload by 12% and improving data accuracy by 14%. Also developed a web-based Hospital Management System using React, Node.js, Express, and MySQL to streamline patient records, appointment scheduling, and staff operations in real time.

Hospital Dashboard

- Developed Developed an alumni record management system using WPF (client-server) and ASP.NET Core with role-based access control, reducing manual work by 10%. Built an end-to-end Hospital Data Analytics Pipeline using Excel, Microsoft Access, and Power BI to clean, analyze, and visualize patient data, enabling billing analysis, department performance evaluation, and appointment tracking.

Airport Ticketing System DB

- Developed an AI-powered chatbot using Python and a Linear Regression model to provide personalized study assistance, health checks, and scheduling, helping 15 students reduce study stress by 17%. Also designed an Airport Ticketing System database using Microsoft SQL Server, implementing 3NF normalization, constraints, queries, stored procedures, views, and triggers to efficiently manage passenger reservations, ticketing, flights, and baggage operations.

Web Development Projects

- My Personal Portfolio, Aurax Industries , Weather App, FMH Factory Webiste
